

## Reaction Stoichiometry Worksheet

As you work through the steps in the lab procedures, record your experimental values and the results on this worksheet.

Table A: Stock solution concentrations of $\mathrm{HCl}, \mathrm{H}_{3} \mathrm{PO}_{4}$ and NaOH

| $[\mathrm{HCl}]$ | $M$ |
| :--- | :--- |

| $\left[\mathrm{H}_{3} \mathrm{PO}_{4}\right]$ | M |
| :--- | :--- |

1. Show your calculation for the mmol of base and the mmol of acid in mixing experiment 1 . Use the same technique for experiments 2-6.

Table B: Temperature data for combinations of NaOH and HCl

| Expt <br> $\#$ | mL <br> NaOH | mmol <br> NaOH | mL <br> $\mathrm{H}_{2} \mathrm{O}$ | mL <br> HCl | mmol <br> HCl | Initial <br> $\mathrm{T},{ }^{\circ} \mathrm{C}$ | Final <br> $\mathrm{T},{ }^{\circ} \mathrm{C}$ | $\Delta \mathrm{T},{ }^{\circ} \mathrm{C}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 20. |  | 20. | 10. |  |  |  |  |
| 2 | 20 |  | 10. | 20 |  |  |  |  |
| 3 | 20 |  | 0 | 30 |  |  |  |  |

Table C: Temperature data for combinations of NaOH and $\mathrm{H}_{3} \mathrm{PO}_{4}$

| Expt <br> $\#$ | mL <br> NaOH | mmol <br> NaOH | mL <br> $\mathrm{H}_{2} \mathrm{O}$ | mL <br> $\mathrm{H}_{3} \mathrm{PO}_{4}$ | mmol <br> $\mathrm{H}_{3} \mathrm{PO}_{4}$ | Initial <br> $\mathrm{T},{ }^{\circ} \mathrm{C}$ | Final <br> $\mathrm{T},{ }^{\circ} \mathrm{C}$ | $\Delta \mathrm{T},{ }^{\circ} \mathrm{C}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 4 | 15 |  | 30. | 15 |  |  |  |  |
| 5 | 30 |  | 15 | 15 |  |  |  |  |
| 6 | 45 |  | 0 | 15 |  |  |  |  |

2. Construct a reaction table in millimoles for experiment 1.

|  | $\mathrm{HCl}(\mathrm{aq})$ | + | $\mathrm{NaOH}(\mathrm{aq})$ | $\rightarrow$ | $\mathrm{NaCl}(\mathrm{aq})$ | + | $\mathrm{H}_{2} \mathrm{O}(\mathrm{l})$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| initial |  |  |  |  |  | - |  |
| change( $\Delta$ ) |  |  |  |  |  | - |  |
| final |  |  |  |  |  | - |  |

3 . What is the limiting reagent in mixing experiment 1 ?
4. Which experiments from 1-3 have the same change in temperature?
5. For the experiments from 1-3 with the same temperature change, what other parameters are the same? Select all that apply.

| mmol HCl | total mL solution |
| :--- | :--- |
| mmol NaOH | initial concentration of NaOH |
| $\mathrm{mL} \mathrm{H}_{2} \mathrm{O}$ | initial concentration of HCl |

## Solutions and Spectroscopy Worksheet

As you work through the steps in the lab procedures, record your experimental values and the results on this worksheet.

Table A: Calibration Curve of $\mathrm{Cu}^{2+}$ Solutions and Unknown

| Stock $\mathrm{Cu}^{2+}$ solution concentration |  |  | M |  | Wavelength | $\ldots$ nm |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Solution \# | Target <br> volume of $\mathrm{Cu}^{2+}, \mathrm{mL}$ | $\begin{gathered} \text { Actual } \\ \text { volume of } \\ \mathrm{Cu}^{2+}, \mathrm{mL} \end{gathered}$ | Target volume of $\mathrm{H}_{2} \mathrm{O}, \mathrm{mL}$ | $\begin{gathered} \text { Actual } \\ \text { volume of } \\ \mathrm{H}_{2} \mathrm{O}, \mathrm{~mL} \end{gathered}$ | [Cu $\left.{ }^{2+}\right]$ (calculated) | Absorbance (measured) |
| 1 | 1.50 |  | 6.50 |  |  |  |
| 2 | 3.00 |  | 5.00 |  |  |  |
| 3 | 4.50 |  | 3.50 |  |  |  |
| 4 | 6.00 |  | 2.00 |  |  |  |
| Equation of Trendline |  |  |  |  | $\mathrm{R}^{2}$ Value | - |
| Unknown \# |  | Absorbance (measured) |  |  | $\begin{gathered} {\left[\mathrm{Cu}^{2+}\right]} \\ \text { (calculated) } \end{gathered}$ | $\mathrm{M}$ |

1. What is the concentration of $\mathrm{Cu}^{2+}$ in Solution 1 that you prepared? Show your calculations neatly.
2. Would you predict the absorbance of solution 2 to be greater or less than that of solution 1 ? Why?
3. What is the concentration of $\mathrm{Cu}^{2+}$ in your unknown solution?

Show your calculations neatly. Record this concentration in Data Table A.
4. You desire to make a copper(II) solution at the same concentration as the unknown you just determined in Part A. How many grams of $\mathrm{CuSO}_{4} \cdot 5 \mathrm{H}_{2} \mathrm{O}$ are required to make 25.00 mL of this solution?

Show your calculations neatly. Record the result as the target mass in Data Table B.

Table B: Preparation of a $\mathrm{Cu}^{2+}$ Solution from solid $\mathrm{CuSO}_{4} \cdot 5 \mathrm{H}_{2} \mathrm{O}$

| Target $\left[\mathrm{Cu}^{2+}\right]$ <br> from Part A, M | Target Mass <br> $\mathrm{CuSO}_{4} \cdot 5 \mathrm{H}_{2} \mathrm{O}, \mathrm{g}$ | Actual Mass <br> $\mathrm{CuSO}_{4} \cdot 5 \mathrm{H}_{2} \mathrm{O}, \mathrm{g}$ | Absorbance of <br> $\mathrm{Cu}^{2+}$ solution | $\left[\mathrm{Cu}^{2+}\right]$ <br> calculated from <br> absorbance, M |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |

5. Comment on how the absorbance of your solution made from solid compares to the unknown solution's absorbance in Part A. Do you expect them to be the same?

Why or why not?

Table C: Preparation of a $\mathrm{Cu}^{2+}$ Solution from stock $\mathrm{Cu}^{2+}$ solution

| Stock $\mathrm{Cu}^{2+}$ solution concentration |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { Target }\left[\mathrm{Cu}^{2+}\right] \\ & \text { from Part A, M } \end{aligned}$ | Target Volume $\mathrm{Cu}^{2+}$ solution, mL | Actual Volume $\mathrm{Cu}^{2+}$ solution, mL | Absorbance of $\mathrm{Cu}^{2+}$ solution | [Cu²+] calculated from absorbance, M |
|  |  |  |  |  |

6. You desire to make a copper(II) solution at the same concentration as the unknown you determined in Part A. How many mL of the copper(II) stock solution are required to make 25.00 mL of this solution?

Show your calculations neatly. Record the result as the target volume in Data Table C.
7. Comment on how the absorbance of your solution made by dilution of a stock compares to the unknown solution's absorbance in Part A. Do you expect them to be the same?

Why or why not?

## Freezing Point Depression Worksheet

As you work through the steps in the lab procedures, record your experimental values and the results on this worksheet.

Table A: Measuring the Freezing Point of Stearic Acid

| Mass of 30 mL beaker | g |
| :--- | :---: |
| Mass of 30 mL beaker plus stearic acid | g |
| Mass of stearic acid | g |
| Measured freezing point of stearic acid (first trial) | ${ }^{\circ} \mathrm{C}$ |
| Measured freezing point of stearic acid (second trial) | ${ }^{\circ} \mathrm{C}$ |
| Average measured freezing point to stearic acid | ${ }^{\circ} \mathrm{C}$ |

Table B: Freezing Point Depression by a Solute, Lauric Acid

| Addition of lauric acid | First | Second |
| :--- | ---: | ---: |
| Mass of 30 mL beaker (from Part A ) | g | g |
| Mass of 30 mL beaker and contents | g | g |
| Mass of 30 mL beaker plus stearic and lauric acids | g | g |
| Total mass of lauric acid | g | g |
| Mass of stearic acid | g | g |
| Colligative molality $\left(\mathrm{m}_{\mathrm{c}}\right)$ of the solution | m | m |
| Predicted $\Delta \mathrm{T}_{\mathrm{f}}$ | ${ }^{\circ} \mathrm{C}$ | ${ }^{\circ} \mathrm{C}$ |
| Theoretical freezing point of the solution | ${ }^{\circ} \mathrm{C}$ | ${ }^{\circ} \mathrm{C}$ |
| Measured freezing point of the solution | ${ }^{\circ} \mathrm{C}$ | ${ }^{\circ} \mathrm{C}$ |

1. Do you expect the freezing point of this solution from the first addition of lauric acid to be at a higher or lower temperature than that of the pure solvent?
2. Using your measured amounts of stearic acid and lauric acid for the first addition, calculate the colligative molality $\left(\mathrm{m}_{c}\right)$ of the resulting solution, the freezing point depression $\left(\Delta \mathrm{T}_{f}\right)$ this molality should cause and the theoretical freezing point of the solution. Enter your results in Data Table B.
3. How did your measured freezing point compare to your theoretical freezing point for the first addition?
$\%$ error $=(($ theoretical value - actual value $) \times 100 \%) /$ theoretical value
4. Do you expect the freezing point of this solution from the second addition of lauric acid to be at a higher or lower temperature than that of the previous solution?
5. Using your measured amounts of stearic acid and lauric acid for the second addition, calculate the colligative molality $\left(\mathrm{m}_{c}\right)$ of the resulting solution, the freezing point depression $\left(\Delta \mathrm{T}_{f}\right)$ this molality should cause and the theoretical freezing point of the solution. Enter your results in Data Table B.
6. How did your measured freezing point compare to your theoretical freezing point for the second addition?
$\%$ error $=(($ theoretical value - actual value $) \times 100 \%) /$ theoretical value

## Calorimetry Worksheet

As you work through the steps in the lab procedures, record your experimental values and the results on this worksheet.

Table A: Validating the Assumption about Insulation

|  | Mass $(\mathrm{g})$ | Temperature $\left({ }^{\circ} \mathrm{C}\right)$ |
| :--- | :---: | :---: |
| Cups and cover |  | $\mathrm{N} / \mathrm{A}$ |
| Cups, cover, and cold water |  | N/A |
| Cold water |  |  |
| Cups, cover, and mixture |  |  |
| Warm water |  |  |

1. When the cold and warm water are mixed, do you expect $\Delta \mathrm{T}_{\text {coldwater }}$ and $\Delta \mathrm{T}_{\text {warmwater }}$ to have the same value or different values? What about $\mathrm{q}_{\text {coldwater }}$ and $\mathrm{q}_{\text {warmwater }}$ ?
2. Calculate $\Delta \mathrm{T}_{\text {coldwater }}, \Delta \mathrm{T}_{\text {warmwater }}, \mathrm{q}_{\text {coldwater }}$, and $\mathrm{q}_{\text {warmwater }}$. Show your work.

| $\Delta T_{\text {cold water }}$ | ${ }^{\circ} \mathrm{C}$ |
| :--- | ---: |
| $\Delta T_{\text {warm water }}$ | ${ }^{\circ} \mathrm{C}$ |
| $\mathrm{q}_{\text {cold water }}$ | kJ |
| quarm water | kJ |

3. Confer with your lab partner and instructor. In this experiment, what is the system and what are the surroundings?
4. When the metal and water are mixed, do you expect $\Delta \mathrm{T}_{\text {metal }}$ and $\Delta \mathrm{T}_{\text {water }}$ to be the same or different?
5. When the metal and water are mixed, do you expect $\mathrm{q}_{\text {metal }}$ and $\mathrm{q}_{\text {water }}$ to be the same or different?

Table B: Identifying Unknown Metal by Specific Heat

|  | Mass (g) | Temperature $\left({ }^{\circ} \mathrm{C}\right)$ |
| :--- | :---: | :---: |
| Unknown metal \# |  |  |
| Cups and cover (from Part A) |  | N/A |
| Cups, cover, and cold water |  | N/A |
| Cold water |  |  |
| Mixture of metal and water | N/A |  |

6. Calculate the specific heat of the metal. Show your work.
7. What is the identity of the metal? Refer to the table below.

Specific Heats of Selected Metals

| Metal | $\mathrm{s}_{\text {metal, }} \mathrm{J} / \mathrm{g}^{\circ} \mathrm{C}$ | Metal | $\mathrm{s}_{\text {metal, }, \mathrm{J} / \mathrm{g} \cdot{ }^{\circ} \mathrm{C}} \mathrm{Al}$ |
| :---: | :---: | :---: | :---: |
| Cu | 0.901 | Fe | 0.449 |
| Si | 0.711 | Ni | 0.444 |
| Zn | 0.389 | Mn | 0.226 |

Table C: Identifying Unknown Metal by Specific Heat

|  | Mass $(\mathrm{g})$ | Temperature $\left({ }^{\circ} \mathrm{C}\right)$ |
| :--- | :---: | :---: |
| Cups and cover (from Part A) |  | $\mathrm{N} / \mathrm{A}$ |
| $\mathrm{NH}_{3}$ solution | $\mathrm{N} / \mathrm{A}$ |  |
| Cups, cover and mixed solution |  | $\mathrm{N} / \mathrm{A}$ |
| mixed solution |  |  |

8. What is $\Delta \mathrm{H}$ for this reaction?

Show your work.

9a. Using volume and concentration, how many moles of $\mathrm{NH}_{3}$ and $\mathrm{H}_{3} \mathrm{PO}_{4}$ were mixed together?

9b. What is the molar value for $\Delta \mathrm{H}$ for this reaction? Show your work.
10. Calculate the amount of $\mathrm{NH}_{4} \mathrm{H}_{2} \mathrm{PO}_{4}$ that you made in Part C in grams.

Table D: Heat of Solution

|  | Mass $(\mathrm{g})$ | Temperature $\left({ }^{\circ} \mathrm{C}\right)$ |
| :--- | :---: | :---: |
| Cups and cover (from Part A) |  | N/A |
| Cups, cover, and water |  | N/A |
| Water |  |  |
| Solution | N/A |  |
| Solid $\mathrm{NH}_{4} \mathrm{H}_{2} \mathrm{PO}_{4}$ |  | N/A |

11. Confer with your lab partner and instructor. In this experiment, what is the system and what are the surroundings?
12. How would you expect the molar change in enthalpy $(\Delta \mathrm{H})$ for this reaction to compare with the heat of neutralization in Part C? (If you would like to check, calculate it now. You will be asked for the value in the WebAssign postlab exercise.)

## Determination of an Equilibrium Constant Worksheet

As you work through the steps in the lab procedures, record your experimental values and the results on this worksheet.

Table A: Calibration Curve of $\mathrm{FeSCN}^{2+}$ Solutions

| Solution <br> $\#$ | Volume of <br> 0.100 M Fe <br> $(\mathrm{mL})$ | Volume of <br> $6.00 \times 10^{-4} \mathrm{M}$ <br> $\mathrm{SCN}^{1-}(\mathrm{mL})$ | Volume of <br> water <br> $(\mathrm{mL})$ | Total <br> Volume <br> $(\mathrm{mL})$ | $\left[\mathrm{FeSCN}^{2+]}\right.$ <br> $(\mathrm{M})$ | Absorbance <br> at $\sim 470 \mathrm{~nm}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Blank | 1.00 | 0.00 | 7.00 | 8.00 | - | - |
| 1A | 1.00 | 1.00 | 6.00 | 8.00 |  |  |
| 2A | 1.00 | 2.00 | 5.00 | 8.00 |  |  |
| 3A | 1.00 | 3.00 | 4.00 | 8.00 |  |  |
| 4A | 1.00 | 4.00 | 3.00 | 8.00 |  |  |
| Equation of Trendline |  |  |  |  |  |  |

1. What is the initial concentration of $\mathrm{SCN}^{-}$in Solution 1A? Show your work; remember to account for dilution. Pay attention to significant figures.
2. Given your result from Question 1, what is the concentration of $\mathrm{FeSCN}^{2+}$ in Solution 1A? Enter this concentration in your data table.
3. How does the intensity of the color of the solutions and the absorbance vary with the concentration of the $\mathrm{FeSCN}^{2+}$ solution?

Table B: Measuring $\left[\mathrm{FeSCN}^{2+}\right]$ in Equilibrium Mixtures

| Solution $\#$ | $\left\lvert\, \begin{gathered} \text { Volume of } \\ 0.002 \mathrm{M} \\ \mathrm{Fe}^{3+}(\mathrm{mL}) \end{gathered}\right.$ | Volume o 0.002 M SCN ${ }^{1-}$ (mL) | Volume of water (mL) | Total Volume (mL) | Initial $\left[\mathrm{Fe}^{3+}\right]$ <br> (M) | Initial $\left[S_{C N}{ }^{1-}\right.$ (M) | $\left\|\begin{array}{c} \text { Abs at } \\ \sim 470 \mathrm{~nm} \end{array}\right\|$ | Calculated Equilibrium [ $\mathrm{FeSCN}^{2+}$ ] <br> (M) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1B | 2.00 | 4.00 | 2.00 | 8.00 |  |  |  |  |
| 2 B | 3.00 | 4.00 | 1.00 | 8.00 |  |  |  |  |
| 3B | 4.00 | 4.00 | 0.00 | 8.00 |  |  |  |  |
| 4B | 4.00 | 3.00 | 1.00 | 8.00 |  |  |  |  |
| 5B | 4.00 | 2.00 | 2.00 | 8.00 |  |  |  |  |

4. Calculate the initial concentration of $\mathrm{Fe}^{3+}$ in Solution 1B. Show your work; remember to account for dilution. Enter the concentration in your data table.
5. Calculate the initial concentration of $\mathrm{SCN}^{-}$in Solution 1B. Show your work; remember to account for dilution. Enter the concentration in your data table.
6. Using your calibration curve from Part A and your absorbance data from Part B, what is the equilibrium concentration of $\mathrm{FeSCN}^{2+}$ in Solution 1B? Show your work.
7. Construct a reaction table for Solution 1B.

|  | $\mathrm{Fe}^{3+}(\mathrm{aq})$ | + | SCN (aq) | $\rightarrow$ | $\mathrm{FeSCN}^{2+}(\mathrm{aq})$ |
| :---: | :--- | :--- | :--- | :--- | :--- |
| initial |  |  |  |  |  |
| change( <br> $\Delta)$ |  |  |  |  |  |
| equilibri <br> um |  |  |  |  |  |

8. From the equilibrium concentrations in the reaction table for Solution 1B, calculate the equilibrium constant for the reaction.

## Mixtures of Acids and Bases Worksheet

As you work through the steps in the lab procedures, record your experimental values and the results on this worksheet.

Table A: Calculated and Measured pH's of Acid and Bse Mixtures

| Reaction \# | Reagents | Calculated pH | Measured pH |
| :---: | :---: | :---: | :---: |
| 1 <br> Water + Strong Base | $10 \mathrm{~mL} \mathrm{H} \mathrm{H}_{2}$ |  |  |
|  | + 5 mL NaOH |  |  |
|  | $\begin{gathered} \hline \text { + additional } 5 \mathrm{~mL} \\ \mathrm{NaOH} \end{gathered}$ |  |  |
|  | $\begin{gathered} \text { + additional } 5 \mathrm{~mL} \\ \mathrm{NaOH} \end{gathered}$ |  |  |
| $\begin{gathered} 2 \\ \text { Strong Acid } \\ + \\ \text { Strong Base } \end{gathered}$ | 10 mL HCl |  |  |
|  | $+5 \mathrm{~mL} \mathrm{NaOH}$ |  |  |
|  | $\begin{gathered} \hline \text { + additional } 5 \mathrm{~mL} \\ \mathrm{NaOH} \end{gathered}$ |  |  |
|  | $\begin{gathered} \text { + additional } 5 \mathrm{~mL} \\ \mathrm{NaOH} \end{gathered}$ |  |  |
| $\begin{gathered} \stackrel{3}{2} \\ \text { Weak Acid } \\ + \\ \text { Strong Base } \end{gathered}$ | $10 \mathrm{~mL} \mathrm{NH} \mathrm{H}_{4} \mathrm{Cl}$ |  |  |
|  | + 5 mL NaOH | to be calculated in lab |  |
|  | + additional 5 mL NaOH | to be calculated in postlab |  |
|  | + additional 5 mL NaOH | to be calculated in postlab |  |
| Weak Base <br> Strong Base | $10 \mathrm{~mL} \mathrm{NaC} \mathrm{H}_{3} \mathrm{O}_{2}$ |  |  |
|  | + 5 mL NaOH | to be calculated in lab |  |
|  | $\begin{gathered} \hline \text { + additional } 5 \mathrm{~mL} \\ \mathrm{NaOH} \\ \hline \end{gathered}$ | to be calculated in postlab |  |
|  | $\begin{gathered} \hline \text { + additional } 5 \mathrm{~mL} \\ \mathrm{NaOH} \\ \hline \end{gathered}$ | to be calculated in postlab |  |

1. For reaction series 1 , water reacting with strong base, compare the pH 's you calculated in your prelab to the pH 's you measured in Data Table A. Please explain any inconsistencies between your calculated and measured results.
2. For reaction series 2, strong acid reacting with strong base, compare the pH 's you calculated in your prelab to the pH 's you measured in Data Table A. Please explain any inconsistencies between your calculated and measured results.
3. For reaction series 3 , compare the pH you calculated in your prelab for a 0.1 M NH 4 Cl solution in Data Table A with the pH you measured. Please explain any inconsistencies between your calculated and measured results.

4a. Construct a reaction table for the mixture of 10.0 mL of 0.1 M NH 4 Cl with 5.0 mL of 0.1 M NaOH .

|  | $\mathrm{NH}_{4}{ }^{+}$(aq) | + | $\mathrm{OH}^{-}(\mathrm{aq})$ | $\rightarrow$ | $\mathrm{NH}_{3}$ (aq) | + | $\mathrm{H}_{2} \mathrm{O}(\mathrm{I})$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| initial |  |  |  |  |  | - |  |
| change( $\Delta$ ) |  |  |  |  |  | - |  |
| final |  |  |  |  |  | - |  |

4b. Calculate the equilibrium concentrations of $\mathrm{NH}_{4}^{+}, \mathrm{NH}_{3}, \mathrm{H}_{3} \mathrm{O}^{+}$and $\mathrm{OH}^{-}$in the resulting solution.

4c. Calculate the pH of the resulting solution.

4d. How does this compare to the pH you measured? Please explain any inconsistencies.
5. For reaction series 4, compare the pH you calculated in your prelab for a $0.1 \mathrm{M} \mathrm{NaC} \mathrm{N}_{2} \mathrm{H}_{3} \mathrm{O}_{2}$ solution Data Table A with the pH you measured. Please explain any inconsistencies between your calculated and measured results.

6a. Construct a reaction table for the mixture of 10.0 mL of $0.1 \mathrm{M} \mathrm{NaC} \mathrm{N}_{2} \mathrm{H}_{3} \mathrm{O}_{2}$ with 5.0 mL of 0.1 M NaOH . Using LeChatelier's principle, explain the effect of $\mathrm{OH}^{-}$on the reaction of $\mathrm{C}_{2} \mathrm{H}_{3} \mathrm{O}^{2-}$ with water.

|  | $\mathrm{C}_{2} \mathrm{H}_{3} \mathrm{O}_{2}^{-}(\mathrm{aq})$ | + | $\mathrm{H}_{2} \mathrm{O}(\mathrm{I})$ | $\rightarrow$ | $\mathrm{HC}_{2} \mathrm{H}_{3} \mathrm{O}_{2}(\mathrm{aq})$ | + | $\mathrm{OH}^{-}(\mathrm{aq})$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| initial |  |  | - |  |  |  |  |
| change( $\Delta$ ) |  |  | - |  |  |  |  |
| final |  |  | - |  |  |  |  |

6b. Calculate the equilibrium concentrations of $\mathrm{C}_{2} \mathrm{H}_{3} \mathrm{O}_{2}^{-}, \mathrm{HC}_{2} \mathrm{H}_{3} \mathrm{O}_{2}, \mathrm{H}_{3} \mathrm{O}^{+}$and $\mathrm{OH}^{-}$in the resulting solution.

6 c . Calculate the pH of the resulting solution.

6d. How does this compare to the pH you measured? Please explain any inconsistencies.

## Buffers Worksheet

As you work through the steps in the lab procedures, record your experimental values and the results on this worksheet.

1. Show your calculation for preparing the $0.60 \mathrm{M} \mathrm{HC}_{2} \mathrm{H}_{3} \mathrm{O}_{2}$ solution from your prelab assignment.
2. Show the calculation of how many grams of $\mathrm{NaC}_{2} \mathrm{H}_{3} \mathrm{O}_{2} \cdot 3 \mathrm{H}_{2} \mathrm{O}$ are needed from your prelab assignment.

Table A: pH Data for Acetate Buffers (Direct Method)

| Solution \# | mL of 0.60 M <br> $\mathrm{HC}_{2} \mathrm{H}_{3} \mathrm{O}_{2}$ | mL of 0.60 M <br> $\mathrm{NaC}_{2} \mathrm{H}_{3} \mathrm{O}_{2}$ | pH |
| :---: | :---: | :---: | :---: |
| 1 A | 30 | 0 |  |
| 2 A | 30 | 10 |  |
| $3 A$ | 0 | 30 |  |
| 4 A | 10 | 30 |  |
| $5 A$ | 20 | 20 |  |

3. Explain the order of pH for the five solutions. Consider the relative amounts of acid and base in each.

Table B: pH Data for Acetate Buffers (Indirect Method)

| Solution \# | mL NaOH <br> added | total mL <br> NaOH added | pH | total mmol <br> NaOH added | Buffer? <br> $\mathrm{Y} / \mathrm{N}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $1 B$ | 0 | 0 |  |  |  |
| $2 B$ | 4 | 4 |  |  |  |
| $3 B$ | 5 | 9 |  |  |  |
| $4 B$ | 6 | 15 |  |  |  |
| $5 B$ | 10 | 25 |  |  |  |

4. How many mmol of acetic acid are present in your sample 1B? Show your work.
5. How many total mmol of NaOH have you added at this point? (Show your setup.) Enter this amount in Data Table B.
6. Is this solution a buffer solution? Explain your reasoning. Fill in Data Table B with your choice.
7. Will you need to use $\mathrm{Na}_{3} \mathrm{PO} 4 \cdot 12 \mathrm{H}_{2} \mathrm{O}$ or $\mathrm{NaH}_{2} \mathrm{PO}_{4} \cdot \mathrm{H}_{2} \mathrm{O}$ in order to generate the desired pH ? Explain your answer. Enter your choice in Data Table C.
8. What mass of the other phosphate compound will you need to add in order to generate the desired pH? Show your work. Enter this amount in Data Table C.

Table C: Data for Phosphate Buffer

| pH Assigned |  |
| :--- | ---: |
| mass of $\mathrm{Na}_{2} \mathrm{HPO}_{4} \cdot 7 \mathrm{H}_{2} \mathrm{O}$ used | g |
| other phosphate compound used |  |
| mass used | g |
| initial measured pH of buffer |  |
| action taken |  |
| final measured pH of buffer |  |

## Titration Curves Worksheet

As you work through the steps in the lab procedures, record your experimental values and the results on this worksheet.

Table A: Titration of KHP

| Concentration of KHP solution | M |
| :--- | ---: |
| Volume of KHP solution titrated | mL |
| Concentration of NaOH solution | M |
| Calculated $\mathrm{V}_{\mathrm{eq}}$ of NaOH solution | mL |

1. From the values in Data Table A, calculate the theoretical equivalence volume $\left(\mathrm{V}_{e q}\right)$ for your KHP titration. Record this value in Data Table A.

Table B: Volume of Titrant Added to KHP vs pH

| Volume NaOH <br> added (mL) | pH | Observations |
| :--- | :--- | :--- |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |

2a. From your titration curve, what is the experimental $V_{e q}$ for your KHP titration? Label the $\mathrm{V}_{e q}$ on each copy of your KHP titration curve. Do not forget to subtract the initial buret reading when determining your $\mathrm{V}_{e q}$.

2b. How do your theoretical and experimental equivalence volumes compare? What is their percent error?

$$
\% \text { error }=\frac{\text { calculated }- \text { measured }}{\text { calculated }} \times 100
$$

Table C: Titration of $\mathrm{Na}_{2} \mathrm{CO}_{3}$ with HCl

| mL of 0.20 M <br> NaOH added | Calculated pH <br> (From prelab) | Measured pH <br> (From titration <br> curve) | \% Difference |
| :---: | :---: | :---: | :---: |

| 15.00 |  |  |  |
| 20.00 |  |  |  |
| 22.00 |  |  |  |

3a. What is the experimental $\mathrm{pK}_{a}$ value for hydrogen phthalate ( $\mathrm{HP}^{-}$or $\mathrm{HC}_{8} \mathrm{H}_{4} \mathrm{O}_{4}^{-}$) that you found at the midpoint of your KHP titration curve?

3b. The accepted value for the $\mathrm{pK}_{a}$ of $\mathrm{HP}^{-}$is 5.408 . How does this compare to your experimental value? What is their percent difference?
4. How did the endpoint indicated by the phenolphthalein compare to the equivalence point determined by the titration curve?

What conclusion can you make about the need for an indicator in a pH titration?

Table D: Titration of $\mathrm{Na}_{2} \mathrm{CO}_{3}$

| Concentration of $\mathrm{Na}_{2} \mathrm{CO}_{3}$ solution | M |
| :--- | :---: |
| Volume of $\mathrm{Na}_{2} \mathrm{CO}_{3}$ solution titrated | mL |
| Concentration of HCl solution | M |
| Calculated first $\mathrm{V}_{\mathrm{eq}}$ of HCl solution | mL |
| Calculated second $\mathrm{V}_{\mathrm{eq}}$ of HCl solution | mL |

5. From the values in Data Table D, calculate the theoretical first and second equivalence volumes ( $\mathrm{V}_{e q}$ 's) for your $\mathrm{Na}_{2} \mathrm{CO}_{3}$ titration.

6a. From your titration curve, what are the experimental first and second $\mathrm{V}_{e q}$ 's for your $\mathrm{Na}_{2} \mathrm{CO}_{3}$ titration? Label both $\mathrm{V}_{e q}$ 's on each copy of your $\mathrm{Na}_{2} \mathrm{CO}_{3}$ titration curve. Do not forget to subtract the initial buret reading when determining your $\mathrm{V}_{e q}$ 's.

6b. How do your theoretical and experimental equivalence volumes compare? What are their percent error?

Table F: Calculated vs Measured pH 's for $\mathrm{Na}_{2} \mathrm{CO}_{3}$ Titration

| mL of 0.20 M <br> HCl added | Calculated pH <br> (From prelab) | Measured pH <br> (From titration <br> curve) | \% Difference <br> (Calculated $=$ <br> actual) |
| :---: | :---: | :---: | :---: |
| 0.00 |  |  |  |
| 5.00 |  |  |  |
| 10.00 |  |  |  |
| 15.00 |  |  |  |
| 20.00 |  |  |  |
| 22.00 |  |  |  |

7a. What are the experimental $\mathrm{pK}_{a}$ values for carbonic acid $\left(\mathrm{H}_{2} \mathrm{CO}_{3}\right)$ and hydrogen carbonate $\left(\mathrm{HCO}_{3}^{-}\right)$that you found at the midpoints of your $\mathrm{Na}_{2} \mathrm{CO}_{3}$ titration curve?

7b. The accepted values for the $\mathrm{pK}_{a}$ 's of $\mathrm{H}_{2} \mathrm{CO}_{3}$ and $\mathrm{HCO}_{3}{ }^{-}$are 6.352 and 10.329 , respectively. How do these compare to your experimental values? What are their percent error?
8. How did the endpoint indicated by the methyl orange compare to the equivalence points determined by the titration curve? What conclusion can you make about the need for an indicator in a pH titration?

## Solubility Product Constants Worksheet

As you work through the steps in the lab procedures, record your experimental values and the results on this worksheet.

Table A: Absorbances of Standard $\mathrm{Cu}^{2+}$ Solutions

| Standard $\mathrm{Cu}^{2+}$ Solutions | Absorbance at _ $\quad \mathrm{nm}$ |
| :--- | :--- |
| $1: 5.0 \times 10^{-4} \mathrm{M} \mathrm{Cu}\left(\mathrm{NO}_{3}\right)_{2}$ |  |
| $2: 1.0 \times 10^{-3} \mathrm{M} \mathrm{Cu}\left(\mathrm{NO}_{3}\right)_{2}$ |  |
| $3: 5.0 \times 10^{-3} \mathrm{M} \mathrm{Cu}\left(\mathrm{NO}_{3}\right)_{2}$ |  |
| $4: 1.0 \times 10^{-2} \mathrm{M} \mathrm{Cu}\left(\mathrm{NO}_{3}\right)_{2}$ | $\mathrm{R}^{2}$ Value |
| Equation of Trendline |  |

Table B: Absorbances of Solutions Saturated with $\mathrm{Cu}\left(\mathrm{IO}_{3}\right)_{2}$

| $\mathrm{Cu}\left(\mathrm{IO}_{3}\right)_{2}$ Saturated Solutions | Absorbance at $\qquad$ nm | [ $\mathrm{Cu}^{2+}$ ] | $\left[1 \mathrm{O}_{3}{ }^{1-}\right]$ |
| :---: | :---: | :---: | :---: |
| A: $1.0 \times 10^{-2} \mathrm{M} \mathrm{KIO}_{3}$ |  | M | M |
| B: $5.0 \times 10^{-3} \mathrm{M} \mathrm{KIO}_{3}$ |  | M | M |
| C: deionized water |  | M | M |
| D: $1.0 \times 10^{-3} \mathrm{M} \mathrm{Cu}\left(\mathrm{NO}_{3}\right)_{2}$ |  | M | M |
| E: $5.0 \times 10^{-3} \mathrm{M} \mathrm{Cu}\left(\mathrm{NO}_{3}\right)_{2}$ |  | M | M |

1. Using the trendline from your calibration curve, calculate the $\left[\mathrm{Cu}^{2+}\right]$ in each of the solutions A - E. Show one representative calculation neatly. Enter these results in Data Table B.
2. Calculate the $\left[\mathrm{IO}_{3}{ }^{-}\right]$in each of the solutions A - E. Remember that for solutions A and B where $\mathrm{IO}_{3}{ }^{-}$was originally present, you must account for the initial amount plus any ions that were formed due to the solubility of the solid. Show one representative calculation neatly. Enter these results in Data Table B.
3. Calculate the $\mathrm{K}_{s p}$ for each of the solutions A - E. Show one representative calculation neatly. Enter these results in Data Table C.

Table C: Calculated $\mathrm{K}_{\text {sp }}$ and Solubilities of $\mathrm{Cu}\left(\mathrm{IO}_{3}\right)_{2}$

| $\mathrm{Cu}\left(\mathrm{IO}_{3}\right)_{2}$ Saturated Solutions | Calculated $\mathrm{K}_{5 p}$ | Calculated <br> Solubility |
| :--- | :---: | :---: |
| A: $1.0 \times 10^{-2} \mathrm{M} \mathrm{KIO}_{3}$ |  | M |
| B: $5.0 \times 10^{-3} \mathrm{M} \mathrm{KIO}_{3}$ |  | M |
| C: deionized water |  | M |
| D: $1.0 \times 10^{-3}{\mathrm{M} \mathrm{Cu}\left(\mathrm{NO}_{3}\right)_{2}}^{\text {E: } 5.0 \times 10^{-3}{\mathrm{M} \mathrm{Cu}\left(\mathrm{NO}_{3}\right)_{2}}}$M <br> Average | M |  |

4a. Calculate the average of your five $\mathrm{K}_{s p}$ values. Enter the result in Data Table C.

4b. The literature value for the $\mathrm{K}_{\text {sp }}$ of $\mathrm{Cu}\left(\mathrm{IO}_{3}\right)_{2}$ is $6.85 \times 10^{-8}$. How does this compare to your average experimental values?

What is the percent error compared to your average?

$$
\% \text { error }=\frac{\text { experimental }- \text { theoretical }}{\text { theoretical }} \times 100
$$

5. Calculate the solubility of $\mathrm{Cu}\left(\mathrm{IO}_{3}\right)_{2}$ in each of the five solutions. Remember that for solutions D and E where $\mathrm{Cu}^{2+}$ was originally present, you must subtract the initial amount from the equilibrium amount to get the amount formed due to the solubility of the solid. Show one representative calculation neatly. Enter these results in Data Table C.
6. Looking at your solubility results for solutions A and B as compared to C, did the solubility increase, decrease or stay about the same in the solutions that originally contained $\mathrm{IO}_{3}{ }^{-}$ions?

Does this confirm the common ion effect? If not, can you explain why it does not?
7. Looking at your solubility results for solutions D and E as compared to C , did the solubility increase, decrease or stay about the same in the solutions that originally contained $\mathrm{Cu}^{2+}$ ions?

Does this confirm the common ion effect?

If not, can you explain why it does not?

## Electrochemical Cells Worksheet

As you work through the steps in the lab procedures, record your experimental values and the results on this worksheet.

Complete the following table.
Table A: Cell Potentials vs a $\mathrm{Zn}^{2+} / \mathrm{Zn}(0.1 \mathrm{M})$ Couple

| Half-Cell | Potential Difference, V |
| :---: | :--- |
| $\mathrm{Ag}^{+} / \mathrm{Ag}(0.1 \mathrm{M})$ |  |
| $\mathrm{Ag}^{+} / \mathrm{Ag}(0.1 \mathrm{M}) \dagger$ |  |
| $\mathrm{Pb}^{2+} / \mathrm{Pb}(0.1 \mathrm{M})$ |  |
| $\mathrm{Cu}^{2+} / \mathrm{Cu}(0.1 \mathrm{M})$ |  |

$\dagger$ Leads switched

1. In your first measurement, since the $\mathrm{Zn}^{2+} / \mathrm{Zn}(0.1 \mathrm{M})$ redox couple is the reference, does your test $\mathrm{Ag}^{+} / \mathrm{Ag}(0.1 \mathrm{M})$ redox couple have a more positive or more negative reduction potential than zinc?

2a. Given your response to the first question, which half-cell is the anode?

2 b . Select all of the following that are true about your $\mathrm{Zn}-\mathrm{Ag}$ cell. (Note: The order of these options may be different in the WebAssign question.)

- $\mathrm{Ag}^{+}$is gaining electrons.
- $\mathrm{Ag}^{+}$is getting reduced.
- Ag is getting oxidized.
- Ag is losing electrons.
- Electrons travel toward the Ag half-cell.
- Electrons travel away from the Ag half-cell.
- $\mathrm{Zn}^{2+}$ is gaining electrons.
- $\mathrm{Zn}^{2+}$ is getting reduced.
- Zn is getting oxidized.
- Zn is losing electrons.
- Electrons travel toward the Zn half-cell.
- Electrons travel away from the Zn half-cell.

3. In your second measurement, how does the voltage differ from the first measurement?
4. Write a net chemical equation for the overall reaction in the $\mathrm{Zn}-\mathrm{Cu}$ cell (spontaneous, left to right). (Omit states-of-matter from your answer. Use the lowest possible whole number coefficients.)

5a. Predict whether the potential of the cell using the $0.1 \mathrm{M} \mathrm{Zn}^{2+}$ solution and the diluted copper solution will be more positive or less positive than the standard potential you measured in Part A.

5b. Select all of the following that are true about your Zn -diluted Cu cell. (Note: The order of these options may be different in the WebAssign question.)

- The cell potential, $\mathrm{E}_{\text {cell }}$, is greater than the standard cell potential, $\mathrm{E}_{\text {cell }}^{\circ}$.
- The cell potential, $\mathrm{E}_{\text {cell }}$, is less than the standard cell potential, $\mathrm{E}_{\text {cell }}^{\circ}$.
- The cell potential, $\mathrm{E}_{\text {cell }}$, is equal to the standard cell potential, $\mathrm{E}_{\text {cell }}^{\circ}$.
- The amount of a reactant has been increased so the potential decreases.
- The amount of a reactant has been reduced so the potential decreases.
- The amount of a reactant has been increased so the potential increases.
- The amount of a reactant has been reduced so the potential increases.
- The reaction quotient, Q , is greater than 1.
- The reaction quotient, Q , is less than 1 .

Complete the following table.
Table B: Cell Potentials vs a $\mathrm{Zn}^{2+} / \mathrm{Zn}(0.1 \mathrm{M})$ Couple

| Half-Cell | Potential Difference, V |
| :---: | :--- |
| $\mathrm{Cu}^{2+} / \mathrm{Cu}$ diluted solution |  |
| $\mathrm{Cu}^{2+} / \mathrm{Cu}$ after addition of KOH |  |

6. Did the potential shift in the direction you predicted in the previous question?
7. Write a net chemical equation for the reaction that took place when KOH was added. (Remember the solubility rules for precipitation reactions. Omit states-of-matter from your answer. Use the lowest possible whole number coefficients.)
8. Select all of the following that are true about your Zn -diluted Cu plus KOH cell. (Note: The order of these options may be different in the WebAssign question.)

- The cell potential, $\mathrm{E}_{\text {cell }}$, increased.
- The cell potential, $\mathrm{E}_{\text {cell }}$, decreased.
- The cell potential, $\mathrm{E}_{\text {cell }}$, remained the same.
- $\left[\mathrm{Cu}^{2+}\right]$ increased.
- $\left[\mathrm{Cu}^{2+}\right]$ decreased.
- $\left[\mathrm{Cu}^{2+}\right]$ remained the same.
- The amount of a reactant increased so the potential increased.
- The amount of a reactant increased so the potential decreased.
- The amount of a reactant decreased so the potential increased.
- The amount of a reactant decreased so the potential decreased.
- The reaction quotient, Q , increased.
- The reaction quotient, Q, decreased.
- The reaction quotient, Q, remained the same.

Complete the following table.
Table C: Cell Potentials for Ascorbic Acid vs a $\mathrm{Cu}^{2+} / \mathrm{Cu}(0.1 \mathrm{M})$ Couple

| $\mathbf{p H}$ | Potential Difference, V |
| :---: | :--- |
| 7 |  |
| 5 |  |

What is the color of lead to copper?

What is the color of lead to graphite?
9. Write a net chemical equation for the overall reaction for this cell (spontaneous, left to right). Use the chemical formulas for dehydroascorbic acid and ascorbic acid. (Omit states-of-matter from your answer. Use the lowest possible whole number coefficients.)
10. Select all of the following that are true about your Cu-ascorbic acid cell. (Note: The order of these options may be different in the WebAssign question.)

- When the pH is changed from 7 to 5 , the reaction quotient increases.
- When the pH is changed from 7 to 5 , the reaction quotient decreases.
- When the pH is changed from 7 to 5 , the $\mathrm{E}_{\text {cell }}$ increases.
- When the pH is changed from 7 to 5 , the $\mathrm{E}_{\text {cell }}$ decreases.
- The reaction quotient, Q , is equal to $\left(\left[\mathrm{C}_{6} \mathrm{H}_{6} \mathrm{O}_{6}\right]\left[\mathrm{H}^{+}\right]^{2}\right) /\left(\left[\mathrm{Cu}^{2+}\right]\left[\mathrm{C}_{6} \mathrm{H}_{8} \mathrm{O}_{6}\right]\right)$.
- The reaction quotient, Q , is equal to $\left(\left[\mathrm{Cu}^{2+}\right]\left[\mathrm{C}_{6} \mathrm{H}_{8} \mathrm{O}_{6}\right]\right) /\left(\left[\mathrm{C}_{6} \mathrm{H}_{6} \mathrm{O}_{6}\right]\left[\mathrm{H}^{+}\right]^{2}\right)$.
- The reaction quotient, Q , is equal to $\left(\left[\mathrm{C}_{6} \mathrm{H}_{8} \mathrm{O}_{6}\right]\right) /\left(\left[\mathrm{Cu}^{2+}\right]\left[\mathrm{C}_{6} \mathrm{H}_{6} \mathrm{O}_{6}\right]\left[\mathrm{H}^{+}\right]^{2}\right)$.

## Chemical Kinetics Worksheet

As you work through the steps in the lab procedures, record your experimental values and the results on this worksheet.

Data Table A: Determination of Rate Law: $2 \mathrm{I}^{-}+\mathrm{S}_{2} \mathrm{O}_{8}^{2-} \rightarrow \mathrm{I}_{2}+2 \mathrm{SO}_{4}^{2-}$

| Run \# | mL of <br> 0.200 M KI | mL of <br> 0.100 M <br> $\left(\mathrm{NH}_{4}\right)_{2} \mathrm{~S}_{2} \mathrm{O}_{8}$ | mL of <br> 0.0050 M <br> $\mathrm{Na}_{2} \mathrm{~S}_{2} \mathrm{O}_{3}$ | mL of <br> 0.2 M KCl | mL of <br> 0.100 M <br> $\left(\mathrm{NH}_{4}\right)_{2} \mathrm{SO}_{4}$ | Elapsed <br> time $(\mathrm{sec})$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 20.0 | 20.0 | 10.0 | 0.0 | 0.0 |  |
| 2 | 10.0 | 20.0 | 10.0 | 10.0 | 0.0 |  |
| 3 | 5.0 | 20.0 | 10.0 | 15.0 | 0.0 |  |
| 4 | 20.0 | 10.0 | 10.0 | 0.0 | 10.0 |  |
| 5 | 20.0 | 5.0 | 10.0 | 0.0 | 15.0 |  |

1. What are the initial concentrations of iodide, persulfate, and thiosulfate in the first run? Account for dilution and show your work.
2. What is $\Delta\left[\mathrm{S}_{2} \mathrm{O}_{3}{ }^{2-}\right]$ at the time of the color change in the first run?
3. What is the rate of the reaction in the first run? Show your work.

Table B: Calculations for Determination of Rate Law

| Run \# | Initial $[1-]$ | Initial $\left[\mathrm{S}_{2} \mathrm{O}_{8}{ }^{2-}\right]$ | Initial $\left[\mathrm{S}_{2} \mathrm{O}_{3}{ }^{2-}\right]$ | Rate | k |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 |  |  |  |  |  |
| 2 |  |  |  |  |  |
| 3 |  |  |  |  |  |
| 4 |  |  |  |  |  |
| 5 |  |  |  |  |  |

4. Inspect the data in Data Table B. What is the order of the reaction with respect to iodide ions? Explain how you arrived at your answer.
5. Inspect the data in Data Table B. What is the order of the reaction with respect to persulfate ions? Explain how you arrived at your answer.
6. Write the rate law for this reaction, showing the proper exponents.
7. Calculate the rate constant for the first run. Include units. Show your work, and record the result in Data Table B.
