<b>Question 1:</b> Which ion emitted the higher energy photons in the visible region: Cu <sup>2+</sup> or Sr <sup>2+</sup> ? Explain your answer.
Question 2: Which ion emitted photons with the longer wavelength in the visible region: Li <sup>+</sup> or Na <sup>+</sup> ? Explain your answer.
<b>Question 3:</b> Which ion emitted the lower frequency photons in the visible region: $Ba^{2+}$ or $K^{+}$ ? Explain your answer.
Question 4: The brilliant red color in fireworks is often due to the emission of red light from $Sr^{2+}$ . If the primary wavelength is 650 nm, what is the frequency of this light?
Question 5: From the data collected and the information gained in lecture, would the anion have a dramatic effect on the color of the light emitted? Explain your answer.
